

LUCENTI

LUCENTI

Oltre le apparenze

Quello che vediamo è frutto della nostra capacità di osservare e di immaginare.

Lì dove finisce lo sguardo inizia la fantasia. E in quel preciso istante prendono vita le emozioni che intessono la nostra esistenza come sottili trame di luce, giochi di contrasti, pieni e vuoti in cui cercare un equilibrio.

In questo intravedere, vedere attraverso, vedere oltre, alcuni desideri si concretizzano, divenendo materia luminosa che definisce lo spazio e lascia all'immaginazione la libertà di creare nuove emozioni.

Con la linea di porte per interni LUCENTI, Dierre cattura l'essenza di queste emozioni attraverso la luce, per trasformarla in nuovi spazi da vivere.

Beyond appearances

Everything we see is the result of our ability to observe and to imagine.

Where the gaze ends, imagination begins. That's when emotions come to life the emotions that thread our existence like subtle light weaves, contrasts, fullness and emptiness where a balance is sought.

Some desires materialise in this glimpse, see through, see beyond, becoming luminous matter that defines space and leaves freedom to the imagination in creating new emotions.

With the LUCENTI line of interior doors, Dierre capture the very essence of these emotions through light, to transform it into new living spaces.

LUCENTI Porte in vetro

LA MATERIA RACCONTA LA LUCE

Dierre cattura la trama narrativa della luce in questa nuova linea di porte a vetri, per raccontare lo spazio che prende vita.

ANTA VETRO STRATIFICATO TEMPERATO - Il vetro stratificato é composto da due lastre di vetro temperato assemblate su tutta la superficie mediante pellicola di PVB (Polivinilbutirrale), il vetro stratificato temperato offre una maggiore sicurezza perchè unisce la durezza del vetro temperato e l'elasticità della pellicola PVB. Questa tecnologia permette disegni / stampe / effetti di trasparenza all'interno della stratificazione.

ANTA VETRO TEMPERATO - La lastra in vetro subisce un trattamento termico di cottura che consiste nel riscaldamento del vetro fino alla temperatura di 700° per poi essere rapidamente raffreddato e riportato a temperatura ambientale. Con questo trattamento acquista le caratteristiche di resistenza cinque volte superiori agli shock termici e meccanici. In caso di rottura il vetro si rompe in migliaia di piccoli frammenti non taglienti.

IMBALLO - L'imballo per l'anta è eseguito in cassa in legno con protezioni. L'imballo per il telaio è costituito da involucro in cartone antiurto.

INDICE

LUCENTI Glass doors

MATTER NARRATES LIGHT

With the narrative texture of light in this striking new line of glass doors, Dierre captures the narrative of space coming to life.

TEMPERED LAMINATED GLASS LEAF - Laminated glass is composed of two tempered glass panes assembled over the entire surface by means of a PVB (polyvinyl butyral) film. Tempered laminated glass offers greater security because it combines the hardness of tempered glass and the elasticity of the PVB film. This technology allows designs / prints / transparency effects within the lamination.

TEMPERED GLASS LEAF - the glass sheet undergoes a thermal baking treatment that consists of heating the glass to a temperature of 700° and then quickly cooling it down to room temperature. This treatment makes it five times more resistant to thermal and mechanical shocks. In the event of breakage, the glass shatters into thousands of small, non-sharp fragments.

PACKAGING - The leaf is packed in a wooden crate with protections. Packaging for the frame is in shockproof cardboard box.

Visual LEAF

Un lieve accenno alla natura, come un soffice letto di foglie mosso dal vento. Per riscoprire il piacere della leggerezza. Porta a vetro con decorazione digitale tono su tono a tema natura.

A faint hint of nature, resembling a soft bed of leaves tossed by the wind. Towards the pleasure of rediscovering lightness. Glass door with tone on tone digital decoration with a nature theme.
